

GLOBAL TECHNOLOGY SUMMIT

Florian Michahelles

Siemens Corporate Research

Florian Michahelles is the head of research group of Web of Things at Siemens Corporation in Berkeley. Together with his team, he investigates to smoothen data exchange between machines and devices to eventually make machines smarter and more collaborative. Prior his engagement with Siemens, Florian worked on connecting products to the Internet. In Switzerland, he developed a universally accepted standard on uniquely identifying connected devices. Following his stint as Director of the Auto-ID lab and lecturer at ETH Zurich, he came to Siemens Corporate Technology to ramp up his own team and is now looking to develop applications for semantic technologies. Florian has published more than a hundred academic papers in international conferences and journals and is actively supporting the research community in voluntary roles as program chair, research proposal evaluator and guest lecturer.
